Bulldozer (D85)	\$300
Machine Transport	POA

Personnel	\$/Hour
Project Manager	\$110
Labourer	\$45

### Material Classification

Dirtworks classifies loads according to material type, compatibility and moisture content. Classification is at the discretion of Dirtworks. The following is intended as a guide only.

**Type 1: Clean Material** - Material with low moisture content. Less than 5% rubble, concrete, or vegetation.

**Type 2: Unsuitable** - Damp or wet material, and/or material with rubble, concrete, or vegetation (this material is trackable).

**Type 3: Very Wet or Very Mixed** - Very wet material or material containing large quantities or pieces of concrete, rubble, and/or vegetation.

**Concrete 1** - Small pieces of clean concrete with minimal reinforcing. Must not include more than 5% soil. If there is more than 5% soil, then the appropriate soil classification above will apply.

**Concrete 2** - Large pieces of concrete and/or reinforced. Must not include more than 5% soil.

**Concrete 3** - Large pieces of concrete and/or heavily reinforced. More than 5% soil and/or vegetation.

**Slurry** - Hydro Excavation material only. We cannot accept material from cess pits or septic tanks.

**Vegetation** - Green waste materials such as trees, plants and mulch
