Bulldozer (D85)	\$300
Machine Transport	POA

Material Classification

Dirtworks classifies loads according to their moisture content, how compactable the material is, and material type. Classification is at the discretion of Dirtworks. *The following is intended as a guide only.*

Type 1: Clean Material – Dry material. Less than 5% rubble, concrete, or vegetation content.

Type 2: Damp/Unsuitable – Damp/wet material or material with more than 5% rubble, concrete, or vegetation (this material is trackable).

Type 3: Very Wet or Very Mixed - Very wet material or material containing large quantities or pieces of concrete, rubble, and/or vegetation.

Concrete 1 - Small pieces of clean concrete with minimal reinforcing. Must not include more than 5% soil.

Concrete 2 - Large pieces of concrete and/or reinforced. Must not include more than 5% soil.

Concrete 3 – Very large pieces of concrete and/or heavily reinforced. Must not include more than 5% soil and/or vegetation.

If there is more than 5% soil mixed with the concrete, then the appropriate soil classification above will apply.

Slurry – Hydro Excavation material, or material/wet that truck tail gates need to be sealed. We cannot accept material from cess pits or septic.

Vegetation – Green waste materials such as trees, plants, and mulch.
