Bulldozer (D65)	\$240
Bulldozer (D85)	\$300
Machine Transport	POA

### Material Classification

Dirtworks classifies loads according to their moisture content, how compactable the material is, and material type. Classification is at the discretion of Dirtworks. ***The following is intended as a guide only.***

**Type 1: Clean/Dry Material** – Dry material. Less than 5% concrete, asphalt, rubble, or vegetation content.

**Type 2: Damp/Unsuitable** – Damp/wet material **or** material with more than 5% rubble, concrete, or vegetation (this material is trackable).

**Type 3: Very Wet or Very Mixed** - Very wet material **or** material containing large quantities or pieces of concrete, rubble, and/or vegetation.

If there is more than 5% soil mixed with the concrete, then the appropriate soil classification above will apply. All concrete must have **NO** exposed/protruding rebar/mesh.

**Concrete 1** - Small pieces of clean concrete with minimal reinforcing.

**Concrete 2** - Large pieces of concrete and/or reinforced.

**Concrete 3** – Very large pieces of concrete and/or heavily reinforced.

**Slurry** – Hydro Excavation material, or material so wet that truck tail gates need to be sealed. (*We cannot accept any cess pits or septic material*).

**Vegetation** – Green waste materials such as trees, plants, bushes and mulch.
